Application/Control Number: 09/608,761

Art Unit: 1743

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Vincent J. Sunderdick on September 28, 2004.

- 2. The application has been amended as follows: claims 10-11, 15-17, 19-20, and 22-23 have been cancelled. Claims 1 and 24 have been amended as follows.
- 1. (Currently Amended) Method for determining the storage state of an ammonia-adsorbing SCR catalyst having at least one channel for receiving gas flow, wherein the change in at least one physical property of the SCR catalyst changes on account of the NH<sub>3</sub> storing process, said method comprising:

applying a measuring pickup to at least one <u>interior</u> surface of said at least one channel of said the SCR catalyst;

sensing an electrical impedance of the SCR catalyst from said measuring pickup wherein the sensing of the impedance takes place at one or more frequencies from the frequency range between 0 Hz and an upper cut-off frequency, at which the wavelength corresponding to the measuring frequency is significantly less than the dimensions of the measuring pickup; and

determining the storage state of the SCR catalyst on the basis of said electrical impedance.

24. (Currently Amended) Method for determining the storage state of an ammonia-adsorbing SCR catalyst having at least one channel for receiving gas flow, wherein the change in at least one physical property of the SCR catalyst changes on account of an NH<sub>3</sub> storing process, said method comprising:

applying a measuring pickup to at least one <u>interior</u> surface of said at least one channel the SCR catalyst;

sensing one of a thermal electromotive force of the SCR catalyst and the SCR catalysts' response to temperature changes, said sensing being provided by said measuring pickup; and

Art Unit: 1743

determining the storage state on the basis of said one of said thermal electromotive force and the catalysts' response to temperature changes.

3. The following is an examiner's statement of reasons for allowance: the art of record fails to teach or fairly suggest the methods as claimed in which a measuring pickup is applied to an interior surface of a channel in an ammonia absorbing SCR catalyst having at least one channel for receiving gas flow.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arlen Soderquist whose current telephone number is (571) 272-1265 as a result of the examiner moving to the new USPTO location. The examiner's schedule is variable between the hours of about 5:30 AM to about 5:00 PM on Monday through Thursday and alternate Fridays.

A general phone number for the organization to which this application is assigned is (571) 272-1700. The fax phone number to file official papers for this application or proceeding is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
